- **DON'T PANIC!** If you get stuck, take a deep breath and go on to the next question.
- Unless the problem says otherwise **you must show your work** sufficiently much that it's clear to me how you arrived at your answer.
- You may use any sort of calculator, but not a phone or a computer.
- It is okay to leave a numerical answer like $\frac{39}{2} - (18 - e^2)$ unsimplified.
- You may bring a two-sided sheet of notes on letter-sized paper in your own handwriting.
- There are 10 problems on 10 pages.

Good luck!

[6 points] 1. Find the derivatives of the following functions. **Do not simplify your solutions.**

(a) $f(x) = \sqrt{3x^2 + 2}$

(b) $g(x) = \frac{\sin(2x)}{4x + 3}$

[4 points] 2. A car drives north on a straight road. After t hours, it has reached a distance of $15t^2$ miles from its starting point. What is its velocity at time $t = 2$?

[9 points] 3. Compute the following integrals.

(a) $\int x e^{4x^2+3} dx$

(b) $\int_0^1 (3x^3 + 1) dx$

(c) $\int \left(2 \cos\left(\frac{x}{3}\right) + x \right) dx$

- [9 points] 4. Compute the following limits. If the limit does not exist, say so. (For a limit that diverges to infinity, it is fine either to say that it is infinite or that it doesn't exist.) Justify your answers by showing work or otherwise explaining your reasoning.

(a) $\lim_{x \rightarrow 5} (x^2 - x - 1)$

(b) $\lim_{x \rightarrow \infty} x^{-2} \ln x$

(c) $\lim_{x \rightarrow \infty} \frac{x^3 - 2x + 5}{2x^3 + 1}$

[10 points] 5. Let $f(x) = e^{3x} \sin(4x)$. Compute $f'(x)$ and $f''(x)$.

[10 points] 6. (a) Sketch a graph of a function $f(x)$ with the following properties:

- it has a horizontal asymptote $y = 1$;
- its absolute maximum is 4;
- its absolute maximum occurs at $x = 2$.

(b) Sketch a graph of $f'(x)$. The graph you draw should be consistent with your sketch in part (a).

- [10 points] 7. We need to enclose a rectangular field by a fence. A building is on one side of the field and so will not need any fencing. We have 500 feet of fencing to use for the other three sides of the field. Determine the dimensions of the field that give it the largest area.

- [10 points] 8. Consider the curve given by the solutions to $x^2 - y^2 = 16$, which forms a hyperbola containing the point $(5, 3)$.

- (a) Find the equation of the tangent line to the curve at the point $(5, 3)$.

- (b) Estimate y for the point $(5.1, y)$ near $(5, 3)$ on the curve.

- [10 points] 9. A spherical balloon is filled with air at a rate of $4 \text{ cm}^3/\text{sec}$. How fast is the radius r of the balloon increasing when $r = 3 \text{ cm}$?

Note: the volume of a sphere with radius r is equal to $\frac{4}{3}\pi r^3$.

- [10 points] 10. Suppose that the signs of $f'(x)$ and $f''(x)$ are as given below. The marks in the diagram indicate where the derivatives are equal to 0, and the $+$ and $-$ signs indicate where they are positive and negative.

On the axes below, sketch the graph of a function consistent with $f'(x)$ and $f''(x)$.
